## **Ready Solar Forms Board of Directors**

*Jigar Shah, Noted Solar Industry Executive, Named Chairman*

**San Mateo, CA – April 1, 2009** – Ready Solar, the company that created the solar-in-a-box industry, today announced it has formed its board of directors with Jigar Shah as Chairman. Telesis, Inc. recently acquired the assets and operations of Ready Solar, Inc. and the new company is doing business as Ready Solar. Separately, Robert Giles was named CEO and Duane Davis was named CTO.

Jigar Shah is founder and former CEO of SunEdison, North America's largest solar energy services provider for commercial enterprises and utilities. "Jigar Shah is a proven leader and strategist for the solar industry," said Ready Solar CEO, Robert Giles. "Jigar will drive the strategic direction of our company as we fulfill the needs of residential and small-scale commercial solar deployments. He has deep market knowledge of renewable energy issues, plus vision and creativity into business solutions that make sense for renewable energy."

Mr. Shah commented, "Solar has traditionally been too complicated at the point of installation. Ready Solar has simplified the installation process, making it easier, quicker and less costly. By pioneering the solar in a box industry with the first pre-assembled rooftop solar system, Ready Solar enables a broad range of construction-related trades to enter the residential solar installer business. This is an important development to drive solar solutions to the residential and small-scale commercial markets. I am impressed by Bob, Duane and the rest of the team and look forward to our working together."

### **About Ready Solar**

Ready Solar created the solar-in-a-box industry, changing the way residential solar electric (photovoltaic) systems are installed. The company's turnkey systems, pre-engineered and pre-assembled with the first all-AC components, are the easiest and most cost-effective way to install rooftop solar for general contractors, electrical contractors, homebuilders and other trades-people with basic electrical proficiency.
