Renewable Energy Vermont (REV) Approves One-Day Solar Installer Training Developed by Green Mountain Electric Supply (GMES) with Ready Solar

*SOLAR IN A BOX™ Reduces Training by Three Days, Opens Solar Market for
Electrical Contractors and Builders*

San Mateo, CA – June 29, 2009 – Ready Solar announced that Renewable Energy Vermont (REV) recently approved the first one-day training for installation of PV residential solar systems. The training was developed by Green Mountain Electric Supply with Ready Solar, the company that created the solar-in-a-box industry and the easy to install SOLAR IN A BOX, the industry's first pre-assembled rooftop solar system for residential and light commercial use.

Green Mountain Electric Supply (GMES), a company that has served Vermont, New Hampshire and New York for over 50 years, developed the program to help traditional electrical contractors take advantage of the growing opportunities in the solar market. "After completing Ready Solar's online installation training, we knew we wanted to develop a vendor-based training course. We partnered with Ready Solar because the SOLAR IN A BOX system is pre-assembled with all-AC construction, making it safer, easier to install and more efficient than traditional PV systems," said Gregg Laber, CEO of Green Mountain Electric.

Andrew Perchlik, Executive Director of REV, added, "Training programs approved by REV have to meet stringent requirements, and we were pleased that the Green Mountain program based on Ready Solar's PV system will be held in Vermont."

Licensed electricians who participate in this course are eligible to apply for provisional partnership with REV, making them eligible to receive Vermont state incentives. SOLAR IN BOX is the first pre-assembled all-AC solar power system available.

Ready Solar CEO Bob Giles, said, "We value the partnership with Green Mountain and appreciate the approval of the vendor training course by REV. As solar continues to gain momentum, we're pleased that

more general contractors, electrical and HVAC contractors, homebuilders and other trades-people can enter this exciting market.”

About Green Mountain Electric Supply

Green Mountain Electric Supply is a third generation family owned Vermont business. Green Mountain Electric Supply is an electrical wholesaler with a division of lighting showrooms that has been serving the markets of Northern Vermont, New Hampshire and New York for over fifty years with locations in Newport, St. Johnsbury, St. Albans and Burlington Vermont as well as Queensbury, New York. Green Mountain Electric Supply is a leader in energy efficient solutions including: LED technology, lighting retrofits, energy audits, custom lighting layouts, and photovoltaic solar

About Ready Solar

Ready Solar created the solar-in-a-box industry, changing the way residential solar electric (photovoltaic) systems are installed. The company’s turnkey systems, pre-engineered and pre-assembled for plug-n-play all AC output, are the easiest and most cost-effective way for general contractors, electrical contractors, homebuilders and other trades-people with basic electrical proficiency to install rooftop solar power. www.readysolar.com

About REV

Renewable Energy Vermont (REV) is working to bring about an intelligent transformation from a foreign fossil fuel based economy to an economy increasingly based on our own renewable energy.
